### Empowering Youth on Ecological Transition

### 1. "You & the environment"

(O Porriño, Spain)

The exchange, held in April 2022 was aimed at youth to develop skills related to environmental good practices. The activities organized by Concello do Porriño and IES Ribeira do Louro included a visit to a water channel, a waste treatment plant, a walk to learn about the natural environment and various seminars on waste, pollution and sustainability. The activity helped young people participating in the project to identify good environmental practices to implement them in their own countries and coollaborating with environmental causes.

# 2. "Green awareness: tools for engagement and impact"

(Nampula, Mozambique)

The ECOYOUTH team travelled in June to the city of Nampula (Mozambique) to implement the last of the mobilities to acquire knowledge regarding environmental respect and social engagement.

Youngsters from the 4 participating countries worked together and participated in different workshops and social engagement conferences. Official visits, seminars on agriculture, field tours and a visit to an orphanage have been just some of the activities that the team has carried out in this event. The young people participating in the activity thanked the ECOYOUTH team for the experience, that entailed a radical change in their minds and their conception of environment and society.

«An experience that we will never forget»

#### 3. MULTIMEDIA HANDBOOK

A Multimedia Handbook compiling Good Environmental Practices from each of the partners' countries

## **ENVIRONMENT**

The Good Environmental Practices have been selected according to the main necessities identified in the first stage of the project: air, waste and energy. Each of the partners collected the 3 most significant GEP in their countries. There will be 4 different Multimedia Handbooks, one per country where the interested public will have the possibility to check the details of the GEP.

## **TECHNOLOGY**

Tecnology is a key competence for the modern society, for that, the Handbook will be produced in electronic format to improve IT skills among the public. Also, that will contribute to avoid the waste of paper, which produces high level of emissions to the atmosphere and consumes many litres of water for its production.

## ADDED VALUE

The project will have an important added value related to the inclusion of regional languages in the project. Two regional languages will be considered in the project: Emakhuwa from Nampula (Mozambique) and Galician from Galicia (Spain). The inclusion of these two languages in the materials will make them more accesible for the entire population and will contribute to the visibility of the diversity of languages around the world.
